What is KlasCamera ISDN?

KlasCamera ISDN is an IP based videoconferencing solution for Inmarsat PC users. It uses MPEG4 compression to deliver a new standard of quality in both motion and image clarity. Users will experience the difference both at 64Kbps and 128Kbps Inmarsat connections. KlasCamera ISDN has been designed to work with all other Klas connectivity products and is a rock solid solution for encrypted videoconferencing sessions over STE and KIV-7 connections, no matter what the speed. KlasCamera ISDN will install on a standard laptop PC and with any digital or analogue video camera.

Secure 64K, 128K and 256Kbps Inmarsat videoconferencing

KlasCamera ISDN has been fully tested with both KlasHopper and the KlasTA for secure videoconferencing sessions. This offers customers a total end to end solution designed from spec for Inmarsat and Type 1 crypto. This guarantees reliability and video quality at 64K right up to 256K. KlasCamera ISDN is perfectly complementary to all other Klas software applications. Users can use KlasPeer2Peer for FTP, Browsing and email while engaged in a videoconferencing sessions with KlasCamera ISDN. This tested interoperability takes the guess work out of designing a fly-away-system that is both IP and PC based.
