

- PIONEER SOLO provides a single user with the same operational performance characteristics and enhancements as our multiuser systems.
- Tested and certified with Android based cellular phones.
- AES 256 IPSEC VPN for added TRANSEC protection
- Field proven TCP acceleration using the KLAS Router KTR software client

MEDIA CONVERSION

For Information Assurance and availability reasons secure base-band modules have historically used BGAN and VSAT networks for reach back capability. However, 3G cellular and public WiFi networks have become less expensive to use and more ubiquitous. WANdroid and SOLO utilize such networks, reducing costs without compromising security.

PORTAL REGISTRATION

Public WiFi networks in hotels require the user to register using a WEB browser. The Android based phones have a built in WEB browser and keyboard, thus allowing network access without the need for an additional computer.

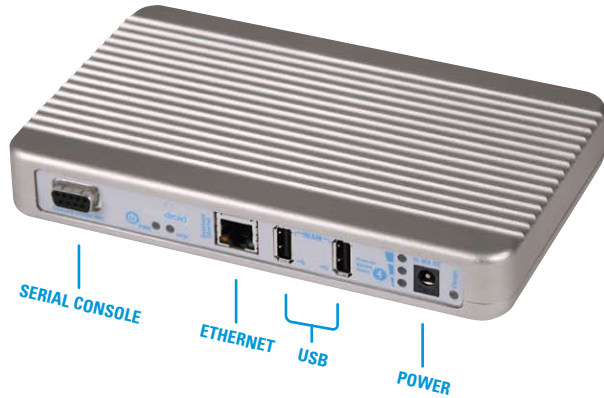

LEAST COST ROUTING

WANdroid and SOLO monitor available WiFi and cellular networks and will automatically switch to the lowest cost available network.

MOBILE SOLUTIONS TS/SCI AND BELOW

Coupling the performance enhancing attributes of the KLAS Router with the cutting edge WANdroid hardware platform, KLAS Telecom introduces the PIONEER SOLO. This hardware/software based solution provides the single user with a highly efficient system for connecting remotely to TS/SCI networks with little more than a laptop, encryption device and cell phone. Key to the SOLO is the KLAS Router software client that provides all of the routing and acceleration features found in our well established AN/PSC-15 (GRRIP), making SOLO completely interoperable with existing Points of Presence (PoPs).

INTEGRATED SOLUTION

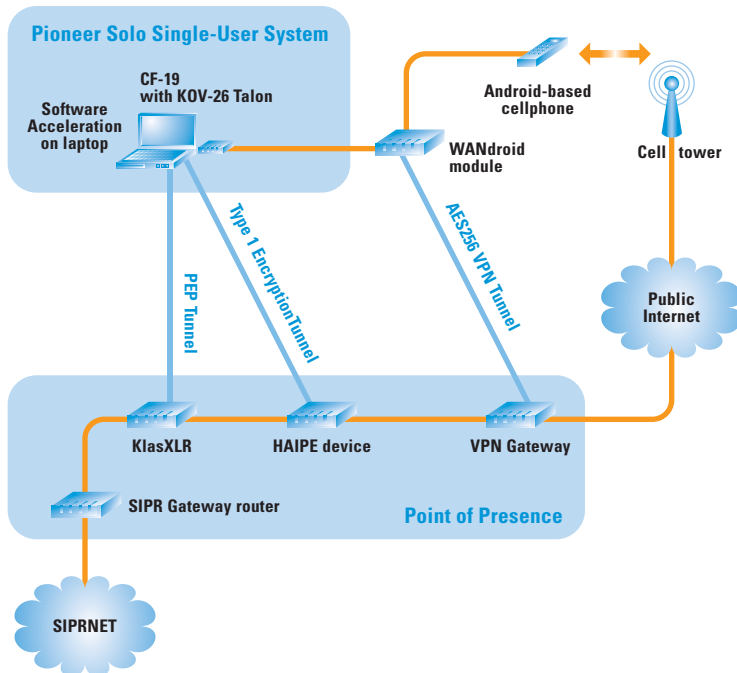

KLAS provides a fully integrated and tested solution, addressing all of your operational requirements. KLAS engineers will configure and test the WANdroid in both cellular and WiFi environments. This includes SIM card provisioning and management. KLAS will also load, configure and test a custom XP image on customer provided laptop.

GLOBAL COVERAGE

Android based cell phones use the global GSM standard for cellular access. This ensures operational coverage in the US, Europe, Middle East and Asia.

BASE PACKAGE WITH OPTIONAL COMPONENTS

The KLAS base offering for the PIONEER SOLO includes the WANdroid, KRT-client software and staging of the entire system including customer provided laptop. Various options are available to include laptop, phone, and BGAN terminal.
